Revelations (and Renovations)

One of the things we do really well here at The Bennett Group is breathe new life into old buildings, whether the project calls for a renovation, an expansion or complete transformation from one use to another. Whatever the case, our design team thrives on creating new looks for aging buildings. It's always a challenge to balance the dreams of our clients with the budgetary constraints and the challenges presented by the property itself. But hey... anything worth doing is always a challenge. And we've helped our clients rise to the task time and time again, across all of the industries we serve.

Over the past year, I have noticed an increase of incoming projects requiring the re-purposing and revitalization of existing buildings. So in this issue of Turnkey, we've chosen to highlight several of our most recent renovations – each representing a different industry. The size and scope of the project varied, but each required improvements that were far greater than merely a fresh coat of paint. So if you're thinking it might be time to upgrade your company's appearance, give us a call and let us help you imagine the possibilities.

~Scott Bennett, *President*

A digital renovation

On a related note...

About fifteen years ago, the folks here at The Bennett Group came to the realization that the Internet was not a fad after all. So we purchased some real estate, created a site plan, and began to build our new headquarters on the World Wide Web. At the time we were really proud.

But as the years passed, we noticed that materials we used proved challenging to maintain, and our little corner of the world began to look dated. We had to face facts... there were newer, better ways of building our home that would also be more cost-efficient over time. So this past winter, we decided to do some digital demolition. We tore our old headquarters down to bare foundation and started anew. If you haven't yet cruised by, we invite you to check out our newly renovated digital headquarters at: www.thebennettgroup.com.

Kingsway Assembly of God in Cherry Hill is Reborn

Kingsway Assembly of God
Administrative Offices &
Nursery Entrance

Kingsway Assembly of God
Lower Lobby

Finding their congregation growth beginning to exceed their capacity and capability, the Kingsway Assembly of God Church decision makers reached out to The Bennett Group for help in devising a design-build strategy to address their

desire for more worship space, while simultaneously revamping their existing facility to reflect the evolution of their parish. With a variety of interior and exterior elements in need of attention, we drew on our rich experience with faith-based

Kingsway Assembly of God's Sanctuary

before...

projects to create a phased approach supporting the church's long-term development plan. This first phase included the creation of a striking entry way comprised entirely of glass panels spanning 24 feet from top to bottom. The new entrance works in tandem with the cross-lobby window walls to flood the renovated atrium and

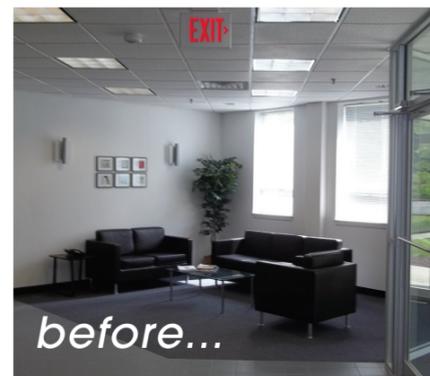

meeting area with a surplus of natural light, providing the congregation with an inviting area to mingle and interact between services. In addition to the entrance, the other church wide projects included a 400 seat sanctuary renovation, complete with a mezzanine, along with the addition of classroom and daycare facilities.

... and after

SGS Life Sciences Labs & Office Transformation

The Bennett Group was happy to be asked by SGS North America to renovate an existing laboratory and office facility. The goal was to create a cleaner and more modern aesthetic while still providing the level of functionality their procedures and operations require. Involved from start to finish, we worked closely with the client to capture the desired look and feel of the interior design plan. A total of 15,000 square feet of space was renovated or updated through the course of the project, including a complete overhaul of the lobby and front desk area. The new atrium features a contemporary soffit suspended above the reception desk, opening into an expansive 22 foot ceiling. Paired with floor to ceiling windows in the entrance vestibule, the lobby communicates the SGS brand and culture to visitors, while providing employees a sense of company pride when walking through the front door every day. The project included demolition and renovation of a corporate boardroom, multiple laboratory work spaces and interior hallways. All elements employed the same design scheme throughout the building to create a sense of continuity.

Rothkoff Law visualizes the possibilities

Rothkoff Law Offices wanted to revitalize their outdated office space. Our challenge was to modernize their existing space and increase its functionality while maintaining the buildings residential aesthetic. The project incorporated interior fit-outs and the creation of an extensive 2-story addition which allowed the two converted residential buildings to operate as one useful workplace. The addition also included updates to the existing building's façade that combined with the new addition to create a cohesive look for the building's exterior.
